

FACTORY RESTART PROGRAM

RESTART WITH CONFIDENCE

Renew and recover to your operational best with our COVID-19 Factory Restart Program. This program helps you address and meet requirements that will ensure the health and safety of your employees and customers.

The Factory Restart Program is an independent, checklist-based audit system, specifically designed for food manufacturing/processing plants.

It provides stakeholders with additional reassurance that all safety measures have been reviewed and reinforced in response to the COVID-19 pandemic.

The program covers a range of areas, including:

- GMP building fabrication assessment
- Hygiene and sanitation assessment and overall housekeeping maintenance.
- COVID-19 risk controls via a standalone or integrated addendum (e.g. social distancing and illness reporting, and additional risk prevention for viral cross-contamination)

The program can be tailored to the specific needs of any business.

The COVID-19 addendum can also be delivered in conjunction with other audit/certification schemes.
